Guide for Authors

The manuscript is written in Microsoft Word 97-2003 document, single space, Cambria 12 pt and minimum 8 pages on A4 paper (210 x 297 mm). The paper should be written in English. Before submission please make sure that your paper is prepared using the journal paper template. The authors must refer to EMITTER journal template and can be downloaded from emitter.eepis-its.edu.

1. Abstract
   An Abstract should be viewed as a mini version of the paper. The abstract should provide a brief summary of important messages of each section of the paper : Background of the Problem (~1 sentence), Problem and its interest (1-2 sentences), Solution (~5 sentences), and Performance (~2 sentences). The Abstract should not exceed 250 words. It should be typed as a single paragraph, and written in Cambria 11 pt.
2. Introduction
   The introduction should also provide the rationale for the present study. Choose references carefully to provide the most important background information. Organization and citation of the bibliography are made in Vancouver style in sign [1], [2] and so on. The introduction should include: (1) Background of the problem, and (2) Problem of the research and its interest. It presents possible clarity, the nature and scope of problem investigated.
3. Related Works
   The related work is a literature review with describes the work that has been done and explain your position work. After reading your related work section, a reader should understand the key idea and contribution of each significant piece of related work, how they fit together and how your work differs.
4. Originality
   Originality contains claim of the uniqueness for the proposed approach as the solution to the problem. It also discusses the basic idea of the proposed approach and the reasons for the choice of the approach.
5. System Design
   The main purpose of this section is to describe (and if necessary defend) the experimental design and then provide enough detail so that a competent worker can repeat the experiments.
   5.1 Tables and Figures
   The title of the table should be concise and not divided into two or more clauses or setences. Tables and their caption are presented center. All tables should be numbered with Arabic numerals. Headings should be placed above tables and center. The table, figure number and caption should be typed below the illustration in Cambria 11 pt and center. Graphics may be full color. Figures should be placed at the top or bottom of a page wherever possible, as close as possible to the first reference to them in the paper.
   5.2 Equations
   Equations and formulae should be typed 11 pt and numbered consecutively with Arabic numerals in parentheses on the right hand side of the page (if referred to explicitly in the text).
6. Experiment and Analysis
   First, you should give some kind of overall description of the experiment, providing the "big picture". Second, you should present analysis of the experimental results. The results of the experiment need to be clearly and simply stated because it is the results that constitute the new knowledge that you are contributing to the world.
7. Conclusion
   Please include a brief summary of the possible clinical implications of your work in the Conclusion section. It also can be followed by suggestion or recommendation related to further research.
8. Acknowledgements
   You should acknowledge any significant technical help that you received from any individual, whether in your laboratory or else where.
9. References
   References should be added at the end of the paper, and its corresponding citation will be added in the order of their appearance in the text. Authors should ensure that every reference in the text appears in the list. References are written in Vancouver style. All reference items must be in 12 pt font.
